Recall #: R0173 | Antilock Brake System (ABS) Control Module Recall Date: 2020 Dec 02

Recall Description

Issue: On certain vehicles, the control module for the antilock brake system (ABS) could corrode internally and cause a short circuit. Safety Risk: A short circuit could create a fire risk. Corrective Actions: Hyundai will notify owners of this problem by mail. Dealers will rework the wiring to the ABS fuse wiring and, if necessary, update the ABS module. Hyundai recommends that you should park your vehicle outdoors, and away from other vehicles or structures until the recall repairs have been completed.

This recall was open as of the date/time that this report was generated. For more information, or to find out if the recall has been closed, please contact HYUNDAI or visit [Hyundai's website](#).

Recall #: R0180 | Engine Control Module Reprogramming (Interim - Recall Remedy Not Yet Available) Recall Date: 2021 Jan 27

Recall Description

Issue: Hyundai Auto Canada is conducting a Product Improvement Campaign that provides an update to the engine control module to detect potential problems before an engine fails. An engine failure would cause a sudden loss of power with an inability to restart. Note: This only affects vehicles equipped with a 2.0 L Nu engine. For the Sonata model, only the Sonata Hybrid is affected by this recall. Safety Risk: A sudden loss of engine power could increase the risk of an accident. An engine failure could also create the risk of a fire. Corrective Actions: The company will notify owners by mail. Owners will be instructed to take their vehicle to a dealer to update the software for the engine control module. Note: Hyundai recommends that you should always follow the correct vehicle maintenance schedule, which is printed in the Owner's Manual. If you experience unusual engine noise, reduced power, or a check engine/oil warning light, Hyundai advises you to immediately visit a Hyundai dealership to have your vehicle diagnosed.
